

SUSTAINABLE FRAMLINGHAM

Who Are We?

We are a group of volunteers acting together to research and explore ideas for how Framlingham can **reduce emissions**, **enhance biodiversity**, **reduce waste** and **increase resilience to the impacts of climate change**.

Some of the areas we are hoping to develop plans for include reducing Fram's carbon footprint, green transport and energy initiatives, reducing single use plastics, expanding recycling facilities and enhancing plant and wildlife habitats.

What's it all for?

In July 2021 Framlingham Town Council declared a Climate Emergency. The Town Council recognises that it does not have the necessary resources or skills to tackle this issue alone. Sustainable Framlingham was formed to bring together individuals and groups who can help to identify and develop projects that address climate change and environmental issues within our community.

What are we up to?

We are asking members of the public what kind of climate actions they are in support of so we can focus our limited resources on developing projects that mean the most to our community.

What's next?

We are on the look out for new ideas and environmental projects that we can put to the Town Council.

If you would like to get involved please get in touch:

James Overbury (Deputy Town Clerk)
